PERIOD

12 June - 31 July

(one and a half months)

TOOLS

SUMMARY

ABOUT PROJECT

This project aims to evaluate and compare credit card fraud detection models using explainable AI techniques by assessing four AI models optimized through hyperparameter tuning and exploring the importance of each feature in our data by SHAP techniques and comparing and testing values of models before and after using feature selection to see how the performance of models is.

WHAT WE HAVE DONE IN THIS INTERNSHIP?

Throughout this summer internship, we launched the project journey right from topic selection, continuing through the various steps, and topping in the final presentation. In the process of bringing this project to completion, we engaged in weekly discussions with our laboratory partners, all of whom are following Master's degrees in Information Management. This collaborative effort played a key role in achieving the successful completion of our project.
